Hi all,

I am writing bitmap printer driver in which i want output of print command to bmp file.

after a searching and reading previous post for this i found that oemuni\interface.cpp IOemUni::ImageProcessing() is idle place to get bmp file. Am i correct?

i tried very simple thing is to create one file using CreateFile/WriteFile/CloseHandle() api's but when i tried to build this i get following errors..

```
oemuni\kmode\infrface.obj : error LNK2019: unresolved external symbol
__imp__CloseHandle@4 referenced in function "public: virtual long
__stdcall IOemUni::ImageProcessing(struct _DEVOBJ *,unsigned char
*,struct tagBITMAPINFOHEADER *,unsigned char *,unsigned long,struct
IPPARAMS *,unsigned char **)"
(?ImageProcessing@IOemUni@@@UAGJPAU_DEV OBJ@@@PAEPAUtagBITMAPINFOHEADER@@@1KPAUIPPA
```

NOTE: i am running winxp checked build environment. similarly for createfile/writefile.

i have added following code in interface.cpp
CreateFile()
WriteFile()
Closehandle()

And also Which component i should go for usermode/kernel mode?

Please point me if i m on correct path...

Thanks in advance.

jrc
