Hi,

I have a problem to install a virtual printer driver. I want to install it as a local driver with an own printer port. My Application can create the printer port, the command "AddPrinterDriver" works without problems, but the last call "AddPrinter" to initialize the driver and restart the print spooler makes problems. The message from Windows is, that a remoute service could not be startet.

The Windows Event portocol shows, that the error occurs in "spoolsv.exe" by calling "USER32.dll". All files are exist on my Windows. Anybody knows how to solve the problem or where I can search?

Thx.

Arek
