how is your device connected to the machine? does it conform to the HID spec? outside of the absolute pointer data, do you need to also calibrate the device and communicate with the driver from a user mode application?

d

I have to write a touch screen driver for Windows XP.

From whatever information I got I conclude that I have to write mini class driver which sits below the Mouclass.sys since there is no Touch Screen Class Driver in XP as in Windows CE. Is this assumption right..??

Also to start with where can I get some sample code to begin with writing a mini class driver for a mouse class driver?
Any related information will be highly appreciated.
