Placing and using WPP Software Tracing in WDM drivers is easy, mainly because the WDK documentation is remarkably detailed and clear.

From reading the WDK documentation, I understand that a Trace Provider can be a user mode application too, not necessarily a driver.

I would like to use WPP to analyze an application that was built using Visual C++ 2005.

How do I do that? Where do I find information about this?

Any tip or pointer to proper documentation would be greatly appreciated.

Thanks,
Don
