zantetsu says:

=====
I created WDM USB driver for Windows 2000 and XP.
Our device has no memory.
So the transfer shouldn't stop.
If the transfer stops, the stop period is limited about 50 micro seconds.
I could get data from our device under Windows 2000 and XP.

I could not get a part of data under Vista.
I found that
the transfer stops during 125 micro seconds per 512k bytes transfer under Vista.

What should I do?

Thanks.

=====

I have the same problem (a time-gap about 3 milisecond after 512k, each time) in same situation now. Anyone knows how to solve this problem ?

Thanks
