Hello All,

I compiled the echo sample driver which is available in the WDK 6000 driver development kit. This is a KMDF based driver, I give proper library version which is mentioned in the echo.inf file.

I tried to install this driver into the Windows XP professional. The Windows XP operating system is not loading this driver, it is returning the error code 37.

Note: I am not able to load any KMDF sample driver Windows XP professional.

Kindly help me as soon as possible it is very urgent.

Thanks in advance.

Regards  
Sulabh
