[Apologies for cross posting, I forgot to add the device drivers group when I posted in windbg]

Hi

We have a problem with a driver that is only reproducible on a Lenovo X300 notebook. The X300 has no serial, no 1394, no docking station, and no PCMCIA.

The only usable port left to try is USB, but using Ajays USB debug cable we also had no luck.

Has anybody been able to get USB based kernel debugging working with the X300? Anything else we could try?

Regards
P.
