I just uploaded MouseHead v2.02 a few minutes ago. Disabled audio. Pointer is tracking better. The v1 tracker, sun button down, is working better for me than the v2 tracker. The v2 tracker, sun button up, is not getting enough data for my lighting conditions (outside sun light). The v2 sliders probably need more adjustment.

The pointer is good enough now in v1 mode that I'm going to add the stabilizer back in and a single stabilization slider control. That will tight the pointer tracking down to nearly perfect.

Thanks,

Tim
