Theme ? The only themeing I see in (managed) directX is the new controls in the framework. If thats the case then I've not seen anyone document you to change those, at least not yet. They pick all of their parts up from a texture called DXUTControls.dds in the media folder. You could edit this with any picture editor to get your own styles as long as you leave the controls in the same spaces. I don't think anyoen has dug into other changes to make but all the u,v coordinates must be in the sample code somewhere if you want to enhance them.

If you are talking about windows themes, media player themes etc then wrong news group.
