Lads,

As the person who asked the initial question which spurred on the ensuing inquest, I've noticed that of the 13 replies in this thread, only a small percentage actually pertain to my question.

I really don't want to get involved in the (new) issue that sidetracked my question, but I have to say that I don't think anyone reading this thread would find it worthwhile or beneficial.

You (MVP) seem to have taken an unnecessarily acute interest in Enze's filters, which, in my opinion, go far beyond what an inveterate poster's legitimate interest should be. I'm not trying to defend anyone, but I don't see the same level of interrogation being applied to anyone else.

I have discussed the legal aspects of disclosing private information with Enze, and he has acknowledged his mistake. We all make them, and in fairness, he has apologized for it. For me, that matter is now closed.

You also seem to take offense at Enze recommending his commercial product in this newsgroup. Please read the following excerpt from the "Rules of Conduct" for this site:

"Advertising/Solicitation: These communities were created as a forum for providing peer-to-peer assistance on Microsoft products and services. We ask that you refrain from posting advertisements or solicitations that do not pertain directly to the intended use and purpose of the newsgroup or chat."

As far as I can see, his product does indeed pertain directly to this newsgroup, and, as such, he has every right to advertise it. And getting back to the original issue I had, Enze's filters are the ONLY solution which has been recommended. Nobody else has been able to provide positive, encouraging feedback, and, at the end of the day, that's what really matters.

microsoft.public.win32.programmer.directx.video: Re: possible to connect 2 graphs?

People like me use this newsgroup and thousands like it every day because we need help. We don't need bickering and one-upmanship. We need answers. So please put aside your differences for the good of the community.

Joe
