-

After many many hours i have the last error and i cant continue

```
1> Creating library Release\MultiVMR9Api.lib and object
Release\MultiVMR9Api.exp
1>MultiVMR9Api.obj : error LNK2001: unresolved external symbol
_CLSID_VideoMixingRenderer9
1>VMR9Subgraph.obj : error LNK2019: unresolved external symbol
_CLSID_VideoMixingRenderer9 referenced in function "public: __thiscall
CVMR9Subgraph::~CVMR9Subgraph(void)" (??1CVMR9Subgraph@@@QAE@XZ)
1>VMR9Subgraph.obj : error LNK2001: unresolved external symbol
_IID_IVMRWindowlessControl9
1>VMR9Subgraph.obj : error LNK2001: unresolved external symbol
_IID_IVMRFilterConfig9
1>c:\windows\system32\MultiVMR9Api.dll : fatal error LNK1120: 3 unresolved
externals
```

I try everything, i search google but i cant solved.
Can you help me?

I dont have C++ and i cant compile.
Can compile you or any other have the C?

OR i must download C and try.

VisualC++ 2005 Express is a free C/C++ compiler you can download from the MS website. You will most likely also need the VisualStudio SP1, the latest Windows SDK and maybe the latest DirectX (all huge downloads). Setting up the environment can be a challenge if you are doing it for the first time. Also, if the code requires MFC or ATL, you will not be able to compile it using the free Express edition of VisualC++.

Re: Multi VMR9 in VB6

Unless you have a specific need for VB6, why not upgrade to VB.NET, which supports __stdcall? VisualBasic 2005 Express is a free VB.NET compiler.
