Hi All,

I wrote a C program that colects machine inventory – it is started from a public share (eg. //SRV/Share/prog.exe) at user Login Script....

Now Windows9x are experiencing Access Violation errors when the .EXE is started from Logon\$ directory (eg. //DC-SRV/Logon\$/prog.exe).

Do you have any idea why it is happening??

TIA,  
Marcio

PS: It's seems not to be a bug on prog.exe, since it works fine on W2K, XP machines... and also, it works fine when started from a local disk on Win9x machines that are experiencing AV. errors...

---
