Hi Slava

This quotation means that there is more than one documented restriction of AWE (although it is totally unrelated to the original question – I don't argue about that). You said that the ONLY documented restriction of AWE is its inability to utilize more than 4 GB of RAM without PAE enabled. Therefore, I just pointed you to one more documented restriction.

Concerning the original question, let me investigate it a bit (if I am wrong, I am going to admit it again – don't worry about that)

Regards

Anton Bassov
