Where is directory chain?
I don't know what "directory chain" means exactly.
can you advice me?

if a.exe process is excuted, I can't overwrite a.exe file
so CreateFile() fails
but I can overwrite a.exe file by write sector.

.... and most likely damage the file system. Do not do it.

While you are not doing this, you should spend some time on learning file system essentials: files, directories, how directories are organised into trees, how they are traversed, etc. You cannot succeed in your project without this knowledge, anyway.
