Or, is using the "/crashdebug" option in boot.ini (on the target computer) the only way to get rid of the VS message?

Ok, I found the boot.ini "/debug=noumex" switch. Sorry for bothering...

But, VS' message is still the same. In addition, the target machine is really slow (mouse movements only every 5th second). So, there is still the question how to start VS on the target machine without this message and without slowdown.

Thanks!

Armin
