Hi V.,

my fault the SID for the Accounts i dont get the Information is the Network-Account. I have full admin rights and all priviliges enabled, but i think, i make some mistake here. I will, i must investigate my code in more detail,...

Regards

Kerem

I still don't get it why you struggle with opening processes and stuff if QueryServiceConfig and the lpServiceStartName member of the QUERY_SERVICE_CONFIG struct gives you all the information you need. I use this function on a daily basis to get the user name of a service. And no, it is **not** the service name, it is the principal under which the service is running.
