Hi,

I tried to fetch the property {6ED8DA90-450B-101B-98DA-00AA003F1305}, 0x3, PT_BINARY after getting the mappings using GetIDsFromNames but still I don't get it.

In OutlookSpy/MFCMAPI, I see it MAPI_E_NOT_FOUND as the value. When will this property be set? I am trying to get it for a recurring meeting. Where can I find more details on this property?

I want to get the ID/handle for a recurring meeting and all its instances/exceptions, so that I can store it in a Db for future edits/cancel. How can I do this?

Thanks, Prabhu

.
