1 and 2. You will need to login as an admin who has access to the mailboxes in question, then use IExchangeManageStore interface to open the other mailboxes. Looks ta thee Exchange 5.5 SDK – there are a few functions that use that interface.

3. Either GAL or ADSI should work.

I want to be able to login into each exchange 2003 mailbox and persist out the inbox /sent messages as OLE/MSG format. I already have code working to save out the messages for a given pre-existing mail profile. Some questions come to mind though:

1. Can I use extended MAPI / MAPILogonEx to login as N different users without pre-existing mail profiles being setup for each user and without knowing each user's password?
2. Should I login as the exchange administrator so that I can access each inbox in step 1?
3. What's the best way to enumerate the exchange 2003 users in this scenario (extended MAPI, ADSI, etc?)

thanks

scottm
