Hello!

Got the following problem. The client application establishes TCP connection to server. After trasmission of certain amounts of data in both directions, the consequent call to 'recv' method fails with WSAENOBUFFS error.

There is nothing about this error for 'recv' case in MSDN.

Application does not work intensively with sockets. The average amount of data transmitted is ~50-200Kb for each direction.

Thank you for support,

Sincerely yours,
Innokentiy Ivanov
