Hi Roger,

Looking at the nature of this issue, it is not a development problem but more like a system configuration issue which could be properly handled in microsoft.public.windowsxp(embedded).

The reason why we recommend posting appropriately is you will get the most qualified pool of respondents, and other partners who the newsgroups regularly can either share their knowledge or learn from your interaction with us. Also, this is to make sure that the responders can better track the problem Thank you for your understanding.

PS: microsoft.public.win32.programmer.networks mainly focused on MS NET APIs. If you get any problems on using MS NET APIs, please feel free to post them here.

Best regards,

Rhett Gong [MSFT]
