Hi All,  
Anyone have same knowledge in serial communication?

I need establish communication between 2 modems, any one have any idea how to this work?

For sample. I have one machine that have a modem and call to other machine that have other modem, and this machines establish communication.

Really in this case the first machine is a POS that call to server (Win2003).

Anyone have same idea? I need a clarification.

Thanks to all.
