Additionally , check what happen when connect() issue SYN , did peer computer (server) answer with ACK (so that the problem of client which isn't return back SYN-ACK)

The following is the error message.

WSAETIMEDOUT Attempt to connect timed out without establishing a connection.

Besides, I remember that if I delete my netcard, then, the client could establish connection to the server for the first time, after that, never again.

When error occurs, we could observe the netstat info as following:
State: "SYN_SENT".

"Arkady Frenkel" <arkadyf@xxxxxxxxxxxxxxxxxxxx> > What error you receive in that case ?

I have written a server program and a client

Re: A strange problem with my computer

one.

However, some strange problem happened to it recently.

Both of these two programs run in my computer. If I set my IP as "192.168.*.*", client could establish connection with the server very well.

If I set IP as "192.111.*.*", the client program could not connect to the server. However, everything is ok if running on other computers.

Maybe because that "192.168.*.*" is a valid intranet IP and "192.111.*.*" is not? I am not sure.

Besides, my notebook is Dell Latitude D610 and OS is Windows XP sp2.
