In addition :

Yes that file (l2cmn.h) you find in Vista SDK but I have it on OTOH in last DDK too
on C:\WINDDK\6000\inc\api\l2cmn.h (last version (1.5) of WDF)

That path is in the list of paths in VC++. Now I've a doubt. In the page
of
Microsoft download

["http://www.microsoft.com/downloads/details.aspx?FamilyID=c2b1e300-f358-4523-B479-F53D234CDDCC"](http://www.microsoft.com/downloads/details.aspx?FamilyID=c2b1e300-f358-4523-B479-F53D234CDDCC)
I've downloaded the file at the link
["http://www.microsoft.com/downloads/details.aspx?FamilyId=10CC340B-F857-4A14-83F5-25634C3BF04"](http://www.microsoft.com/downloads/details.aspx?FamilyId=10CC340B-F857-4A14-83F5-25634C3BF04)
but not the SDK for Vista of about 1GByte because the page says:

.....

This SDK is designed for use with Windows Vista (which includes Framework 3.0). The Windows SDK for Vista also supports creating applications for Windows XP, Windows Server® 2003 SP1, and Windows Server 2003 R2.

This download contains the SDK only. To build .NET Framework 3.0 applications for Windows XP or Windows Server, the .NET Framework 3.0 Runtime Components must be downloaded separately.

This release of the Windows SDK is compatible with Microsoft® Visual Studio® 2005 and the Visual Studio 2005 extensions for .NET Framework 3.0 (WCF & WPF), November 2006 CTP.

.....

I've VC++ 6 and XP. That SDK is not compatible with it. Right? In anyway, what happen if I try to install that SDK?

Re: Wireless in c++

I can't find the .h file 'l2cmn.h'. Maybe it is in the SDK for Vista.
