Hi All,

Could any body help me. Regarding how to check a URL is Valid or Invalid.

I am using Four functions to check the same.

```
1) hConnect = WinHttpConnect( hSession, "www.google.co.in",  
INTERNET_DEFAULT_HTTPS_PORT, 0);  
2) hRequest = WinHttpOpenRequest( hConnect,  
"{GET}",  
pUrl, /// "/sea123rch?  
hl=en&q=flow123ers&meta=" NULL,  
WINHTTP_NO_REFERER,  
WINHTTP_DEFAULT_ACCEPT_TYPES,  
WINHTTP_FLAG_BYPASS_PROXY_CACHE );  
3) bResults = WinHttpSendRequest( hRequest,  
WINHTTP_NO_ADDITIONAL_HEADERS, 0,  
WINHTTP_NO_REQUEST_DATA, 0,  
0, 0 );  
4) bResults = WinHttpReceiveResponse( hRequest, NULL );
```

Here is my observation when I have given the wrong URL in WinHttpOpenRequest(..pUrl..), it has to throw the ERROR_WINHTTP_INVALID_URL or at least WinHttpSendRequest() has to throw the Exception but I haven't getting this.

Would I have to set any flag to check URL is valid or not please if any Sample code would be good.

Can any body please help me out to sort out this problem.

Here is the example for Valid and Invalid URL:

Valid URL:

How to Checking a URL :Valid or Invalid

<http://www.google.co.in/search?hl=en&q=flowers&meta=>

Invalid URL:

<http://www.google.co.in/sea123rch?hl=en&q=flow123ers&meta=>

Regards,
Rs.

.
