Matthias, Andreas

I'm using windowsXP, so i don't have phone dialer installed.

I turn to use the original example of Platform SDK (just compile and run).

It returns the same problem. We can talk for a period of time , after that it automatically disconnect.

When I try to use this example in one computer (my computer). It does not return disconnect(it work well)

So maybe a problem of network (no firewall) or my friend computer configuration.

I changed configuration of volum control (properties->recording->check Microphone checkbox) before so that we can talk (if i don't check it, we couldn't talk)

Any suggestion

Thanks,

Vuong

.
