- 

Hello,

We have been developing a TAPI application which is using Avaya TSP ( TAPI 2 ) and working together Avaya IP Office Environment. Users of the application can change their computer very quickly. And users cannot make "Avaya TAPI 2 Configuration" ( that is located under Control Panel à Phone And Modem Options à Advanced ) when they changed their computers. Hence is there any easy way to make "Avaya TAPI 2 Configuration" programmatically?

Also when we changed "Avaya TAPI 2 Configuration", those changes will not be active without restart computer. Do we have to restart everytime when we make changes Avaya TAPI 2 Configuration"?

Thanks for advance.

.
