Hi,

I am using julmar tapi wrapper. It is working fine, I am able to dial, transfer and disconnect call but I am unable to make conference. First I make H 323 IP call to first machine and it is all okay. When I try to make conference using the code given below it give me exception "This method is not supported" when it tries to execute `call.Conference(consultCall, false);`

Note: call object in the given code is connected call object of call made to first machine.

```
try
{
TCall call = TapiCall.objTCall;
TCall consultCall = null;

TAddress addr = gAddress;
LINEADDRESSTYPES addrType =
(LINEADDRESSTYPES)LineAddressType;

TAPIMEDIATYPES mediaType = TAPIMEDIATYPES.AUDIO;
if (addr.QueryMediaType(TAPIMEDIATYPES.VIDEO))
mediaType |= TAPIMEDIATYPES.VIDEO;

//Create a call -- this should always succeed
consultCall = addr.CreateCall(DestinationAddress,
addrType, mediaType);
call.Conference(consultCall, false);

}
catch (Exception ex)
{
}
```

I wonder why it is giving me such exception. I did the transfer with the same code pattern. If someone has accomplished conference calling then his/her help can take me out of this. Any help in this regard will be highly appreciated.

Julmar conference problem

Regards

Raja Adil.
