

MoveWindow does not move window on Vista.

I am experiencing a strange problem on Vista.
I have a bunch of windows, frames with splitters with childframes etc.

On one level there is a MFC CFrameWnd hosting a MFC CDialog as a child.

When i resize the toplevel frame the CFrameWnd in question recives a WM_SIZE in where it calls MoveWindow() on the child CDialog, the strange thing is that the dialog does NOT get a WM_SIZE.

This will ofcourse make the GUI look like crap and i have no clue to why this is happening.

Does anyone know what could possible cause this behaviour?

On XP the dialog gets it's WM_SIZE and the GUI looks like it should.

/Magnus
