Hi Feng.

Since you are not familiar with Exchange Client Extensions, I think I can reproduce the problem in an Outlook COM addin based on KB 230689. (<http://support.microsoft.com/kb/230689/EN-US/>)

I'll see if I can add the code to that sample and e-mail you the project.

Hello Mark,

Based on my understanding, it is the Exchange client extension (myaddin.dll) which has this problem. If I have misunderstood you, please let me know.

However, we re not very familiar Exchange related technologies, so could you please post here the detailed steps so that we can reproduce this issue locally? Or could you please send a sample project to my email box in case if this is convenient for you? My email address is (v-fengch@xxxxxxxxxxxxxxxxxxxxx, remove '.online'). In this way, we can work on this issue more efficiently.

I look forward to hearing from you and appreciate your time and patience.

Best regards,
Feng Chen

Hi Jeffrey.

Both versions of ComCtl32 are loaded.

This seems to be the case whether my addin is enabled or not.

mydll.dll.manifest was never requested by the loader. I have a COM Addin that is also loaded and I see the registry being queried for a manifest name for that DLL (it does not have one). myaddin.dll is not a COM addin. It is an Exchange client extension so it has no entry at HKLM\SOFTWARE\Microsoft\Office\Outlook\Addins\<addin-name>\Manifest

Does it need one? Will this only work for COM Addins?

Hi Mark,

Thank you for the feedback.

To troubleshoot this issue, the first thing I would check is the ComCtl32.dll loaded version. You may download Process Explorer from the link below and find your application process in the process tree, then you can find the ComCtl32.dll from this process' "Dll Panel". What is the version of it? Is it 6.0?
<http://technet.microsoft.com/en-us/sysinternals/bb896653.aspx>

Also, I suspect if the mydll.dll.manifest is correctly used. It would be

Re: SysLink Control Problem

easy for us to use Process Monitor to log the file system activity of your process. We can use the "Path" contains "mydll.dll.manifest" as the "Include" filter. This monitoring helps us to check if the "mydll.dll.manifest" is probed by the loader. You can download the Process Monitor tool from the link below:
<http://technet.microsoft.com/en-us/sysinternals/bb896645.aspx?PHPSESSID=d926>

I will wait for your further information. Thanks.

Best regards,
Jeffrey Tan
