My ApplicationManager object is running in a thread called _updaterThread. I'm unable to kill it. After this code executes, I can still see the process in Task Manager. Is this the proper way to kill it? Do I have to call _updaterThread.Abort ?

```
_updater.StopUpdater();
if( null != _updaterThread )
{
    // join the updater thread with a suitable timeout
    bool isThreadJoined = _updaterThread.Join( UPDATERTHREAD_JOIN_TIMEOUT );
    // check if we joined, if we didn't interrupt the thread
    if( !isThreadJoined )
    {
        _updaterThread.Interrupt();
    }
    _updaterThread = null;
}
```
