I am trying to end a task and continue proces flow to anothre web-application (for registration) that does not use the block, and uses normal aspx pages. However, when I redirect, or meta-refresh to the new site, i Always get the 'session moniker' problem where it wants to see a webformview page, and not a normal page :(

ive tried, OnEndTask() in the controller just before i load the new app etc, it doesnt seem to help. any ideas guys?
