First off I am using windows server 2003, IIS 6.0 .Net framework 1.1.4322.....

I am attempting to use COM+ Loosely Coupled Events (LCE) from an asp.net web service but I am receiving a 'System.UnauthorizedAccessException' exception saying 'Access Denied' when attempting to call 'COMAdmin.ICatalogCollection.SaveChanges' method to subscribe to a transient subscriptions. The COM+ server runs under the 'network service' account and the asp.net web service runs under the standard asp.net account.

I have enabled impersonation of the local security policy for the 'network service' account and everything works perfectly from a desktop application but fails from an asp.net application, so obviously this is a permissions problem.

So I then added code to impersonate a more privileged user account (Domain User, Admin User, Enterprise User) for the COM+ event subscription but it still fails.....

Does anyone know the privileges I need to grant to allow me to subscribe to a COM+ transient subscriptions?

Cheers in Advance

Ollie
