Yes, DCOM can help this problem. If the client and server are both Windows based, consider using COM+ since it simplifies the use of DCOM.

Actually ,Now we generating some messages,commands, which used inside the Ewsd switches, happending in CLIENT side ,problem is, for each generation,accessing the Database which is in server side takes a lot of time ,so planning to transfer the generation in SERVER side itself .to avoid accessing the Database often and make the generation as fast .

The query is, IS DCOM technology will help me ,regarding this problem .else suggest which technology is solve my problem .

Expecting ur's valuable suggestions ...
Thanks in advance ..
