New user of SQL

Everything is on the same machine

My error is close to the bottom

After reading it today, I can see there is a problem with 2 dbases

'PUBS' and 'Master'

There are also some comments from the group:

---microsoft.public.sqlserver.odbc--- subject: Permission Denied --- Thanks
for help guys

I was able to find a trial version of the Enterprise Manager.

It was suggested to make the post over in dotnet.framework. I am new to SQL. I can see the following in the MSDE manager:

```
sql server(my machine name\??SDK)
after I right click on 'PUBS'
---Users/Roles/Public
---public
---machine_name\aspnet
---guest
```

guest is the only one with 5 check marks going across from left to right for the following:

Create Table, Create View, Create SP, Create Default, Create Rule

the following 3 are blank:

Create Function, Backup DB, and Backup Log

public has just 1 check mark on

Create SP

machine_name\aspnet is blank from left to right.

CREATE DATABASE right is not displayed.

How can I solve my Permission denied error problem?

Thanks for the help,
Taishi

---Comments---
Hi Tashi!

You can use Enterprise manager to set the rights. Locate the table, and right click. Select All Tasks, then Manage Permissions. Locate the user that you are using in your connection object, and then grant the rights. I agree with Greg that the web user should not normally have that level of permission. One false move and your server and data could be toast. If you are really trying to create a table, or attach a database, you should be doing that through Enterprise Manager, and not the web interface.

Sloan
