Hmm... I don't know what that takes the CurrentUICulture from, to be honest. As I said before, you should be avoiding the issue entirely by not formatting the DateTime at all, but it would be interesting to work out what's going on.

What web browser are you using, and what settings have you got in it? For instance, in Mozilla there's the Preferences/Navigator/Languages dialog which shows the order of preference. If you've only got English[en] or you you've got English/United States [en-us] at the top of the list, that might explain things.
