Hello, Ryan:

Thanks for your reply. I used it, such as:

```
s="select [Company name],CompanyID from companies order by CompanyID asc";  
OleDbDataAdapter adapter=new OleDbDataAdapter(s,con);
```

```
adapter.Fill(ds);
```

But I always get follow exception:

System.Data.OleDb.OleDbException: No value given for one or more required parameters.

what's wrong I have done?

Sincerely,

haiwen
