Ricardo,

Maybe this is because Paradox is file based database...and we all know about .NET security especially in ASP.NET. Maybe this caused your problem. Why do not place your .db file (along the other files which are part of the database) in your application folder, but I doubt that this will work. There is one paradox.net which must be accessed too...

See what I have find –

<http://forums.aspfree.com/archive/t-39935/Paradoxnet-ODBC-error-in-WEB-application>

The second poster claims that he solved the problem, but he do not explains what he exactly did...

I hope you will be able to solve your problem.

Best,

Philip.

.
