The SQL Native Client (via OLE DB) is designed to expose all of SS 2K5's functionality. While the old OLE DB provider might work, it's not recommended for a litany of reasons. I would also expect a normal SqlConnection connection to work as well, but not expose all of the new features.

Is it possible to use VS.NET 2k3 to access SQL Server 2k5? Do you need any special data access provider or will the built in provider work?

Thanks
