I am trying to test distributing a Windows application that accesses a Jet DB (.mdb) database file. On my development box running Windows XP Pro with Office Pro (and Access) installed, it runs fine. On my test machine running Windows Server 2003 without Office, it fails with

Request for the permission of type 'System.Data.OleDb.OleDbPermission, System.Data, Version=2.0.0.0, Culture=neutral, PublicKeyToken=b77a5c561934e089' failed.

I have checked, and the Jet Database engine is installed on that machine. It also has Framework 1.1 and 2.0 installed (this app was developed using 2.0). The code is straight from Microsoft's sample ado.net application <http://msdn2.microsoft.com/en-us/library/dw70f090.aspx> using the OleDb connector.

I have found many clues on how to fix this problem when using ASP.NET, but nothing when it occurs in a Windows application. Anyone have any ideas?

Thanks,
Carole
