Thanks a lot

I'll start with Oracle provider, not Ms.

Hi,

My app needs support for Oracle 10 g database : reading (select ...) +
updating + calling stored procedures + distributed transactions
eventually. I built it in VS 2005 (ado.net 2.0).

What should I use ? Microsoft Oracle .NET Managed provider or Oracle Data
Provider for .NET 2.0 ?

I want to know the limitations of each one, tricky pbs, licensing.

Microsoft did release a new Oracle.NET for .NET 2.0 ?? I found only the
version 1.0

(<http://www.microsoft.com/downloads/details.aspx?FamilyID=4f55d429-17dc-45ea-bfb3-076d1c052524&D>

Does anyone know if I can use promotable transactions (TransactionScope)
when working with Oracle 10g ?

Thanks for any advice
