Hi Schoo,

>From your description, you've setup the IE Web control on a Dev machine and a server machine and worked well. But when you want to redistribute them and use the controls on another workstation, they didn't display well, only display plain text rather than structured elements, yes?

As far as I know, such display problems are likely caused by the IE Web controls's clientside resouces(images, script or htc behavior files) not correctly installed. When using IE Webcontrols, we need not only referent the ie webcontrols's assembly dll , but also install those resources files in a folder named "webctrl_client" in the website's root folder(" wwwroot" for example). And the complete folder structure under the site root should like

```
/wwwroot/  
  /webctrl_client/  
    /1_0  
      resource files  
  /other application folders
```

So please have a check to see whether all the machines that use the IE web controls has correctly installed this in the website's root. In addition, here are some former thread discussing the similiar problem, you may also have a look to see whether they can provide any clues:
