Hi,

At the moment i'm developing a Timer custom control, and i finally reached the stage where i need to persist it across page postbacks. What would be the best way of doing it?

At the moment the only way that i see is by use of the cookies. (i was also thinking about using a hiddent field – but with this approach i do not know how to retain value across postbacks or page reloads)

I would greatly appreciate anyones input on the matter :)

TIA

Nick Goloborodko
