The control in question is not data bound.

Is this possible? Is it perhaps possible with a different syntactical construction; e.g. perhaps with <%# %>?

I noticed that I can use <%#S()%>, but only if I call DataBind() on the control. As this is a custom control that I don't want to have to explicitly DataBind(), I am currently doing a 'self-bind' by calling DataBind() in the control's OnInit(). Is this an acceptable way of doing things?

Thanks.
