Hello,

I am trying to create a new Web Control (ASP.NET 1.1) that contains among other textboxes. The content of these textboxes (runat=server) might be changed by client-side Javascript code, like:

```
document.getElementById('txt...').value='...';
```

Then, at server side, I will need to retrieve the NEW content of these textboxes later on...

The problem I am facing is that I don't retrieve the new content of the textboxes... It seems that after postback, I don't get these new values...

Could someone explain me how to achieve this?

Many thanks

.
