Hi,

I've been working on a custom webcontrol with a property that references another webcontrol from the same page.

In my special test case I have a Person_firstname1 control and a PersonSource1 control. The Person_firstname1 have a property of the type PersonSource. Now i want to assign the this property in the visual studio designer. How could I persuade the designer, to show a dropdown list of the controls in the page with the correct type (e.g. PersonSource1, PersonSource2 etc.)

Thanks in advance,
Mirko
