I'm using VS.Net 2005 I've created a class library it has two classes, here is the code:

Basket.cs:

```
using System;
using System.Collections;
using System.Web;
using System.Web.UI;
namespace OFiR.Web.Controls
{
    [ParseChildren(true)]
    class Basket : Control, INamingContainer
    {
        private ITemplate _headerTemplate = null;
        [TemplateContainer(typeof(BasketHeader))]
        public ITemplate Header
        {
            get
            {
```
