Well Tina i do answer questions on this forum.
Thats true the wecontrols ver 1.1 aren't supported and you would have to play with it to get it right.I have used the Treeview ver 1.1 and i like it.
I haven't come across TABSTRIP control for ver 2.0.

I got so excited when I saw that there was a response to my question. I've never had anyone respond to a question on this forum before. Ah, but it was just asking another question.....

I'm trying to use the unsupported I.E. WebControls for .net 1.1. I didn't know there was a version for 2.0. Where can I get these?

Anyway we have decided to not use the controls. They don't work, the docs are terrible, and this forum, where no one ever answers a question about them, is the only form of support.

This tabstrip control has strange behavior. If any border is applied to

the

tabs they all appear in as though they are in a div with both

Re: Any Help on TabStrip Control??

horizontal

and

vertical scroll bars.

Does anyone know how to defeat this behavior?

thanks,

T
