Hi Francois,

Thanks for your followup. As for the "Security Issue" you mentioned, I do think it is a potential cause, you may try adding a new codegroup(specify the certain url of the webservice) via the .net configuration tool(in control panel--->administrator tools) and grant it with FullTrust. Then try adding the web reference again to see whether the problem remains. Also, you may try adding the url into the trusted sites list and then adjust the Intranet Zone 's trust level to FullTrust to see whether this works.

Regards,

Steven Cheng
