Hi all,

I made a web service from a mobile device connected via USB to my desktop computer. The web service generates a wav file from a text using SAPI 5.1. When I call the .Speak function on the service the

System.UnauthorizedAccessException

exception is thrown. The webservice is running on my computer, no internet is required. I suppose this is thrown because SAPI reads the registry, and probably it has not the right privileged level. Although I set all the zones' permission sets to FullTrusted.

Please, help me!

Thanks in advance,  
Bálint Tóth
