Hello,

I have a web application that doesn't use SSL at all. We need to integrate it with another third party web application which only offers secure web services. How can I connect to a web service that is https? Is it sufficient in VS 2005 to just create a reference to the web service like any other web service? (https:// instead of http://)

Thank you  
Maz.

Well, I would suggest give a try and see what sort of result you are getting. There are some other elements in it and it also depends how the Web Service is setup on the server like .Net 1.1 cannot support SSL 2.0 and only support 3.0. It depends in ur case.

Just in case here are two URLs, which will go through you step by step how to configure and use web service, which uses HTTPS in different circumstances.

<http://support.microsoft.com/default.aspx?scid=KB;EN-US;q307267>  
<http://msdn2.microsoft.com/en-us/library/aa302409.aspx>

Again give a try and then let me know if you have any problem. In our case it works fine.

Cheers,  
Amer
